

Unlimited Investment Opportunities

The Second Exhibition and Conference on Investment and Development Opportunities of

Oil, Gas, Petrochemical and Renewable Energy Industries

In the Iran Free and Special Economic Zones

► Exhibition's Groups of Industry

Headlines and activity fields of the event's participants:

Product Groups at the Exhibition

Headlines and activity fields of the event's participants:

1. Free and special economic zones
2. Petroleum Ministry, Energy Ministry, Industry, Mine and Trade Ministry and their affiliated companies
3. E & P companies, GC companies, EPC companies
4. Maritime and offshore companies
5. Startup firms
6. Oil industry's accelerators and startups
7. Universities and research centers
8. Science and technology parks
9. Process equipment (tower, converter, tray, etc.)
10. Packages required by the oil industry
11. Fixed mechanical equipment (reservoir, converter, tank, etc.)
12. Petrochemical downstream industries
13. Optimization of fuel and energy consumption
14. Insurance
15. Capital market (commercial banks, investment

banks, capital management companies and financial

advisories)

16. Power
17. Electronic and instrumentation
18. Catalysts and chemical material
19. Telecommunications and IT
20. Automation
21. Rotating machines (manufacturers and O&M companies, operation and repairs) (pumps, compressors, turbines, etc.)
22. The environment
23. Safety and health
24. Laboratory services and equipment
25. Industrial valves
26. Pipes and fittings
27. Steel sheets
28. Commercial firms involved in oil, gas, refining and petrochemical industries
29. Oil refining companies and producers of oil products

► The Second Exhibition and Conference on Investment and Development Opportunities of Oil, Gas, Petrochemical and Renewable Energy Industries In the Iranian Free and Special Economic Zones

IFEEX is an exhibition and conference set to be held annually on investment opportunities available in the Iranian oil, gas, petrochemical and renewable energy industries in the country's free and special economic zones.

Due to the highly significant role that the free and special economic zones can play in the development of the national economy, the IFEEX has a focus on the following key issues: reemerging the existing capacities and highlighting the investment opportunities already available in the free and special economic zones; introducing new avenues for investment; regaining investors' trust for new investment projects; expanding ports; enhancing the capacities of the North-South Corridor project; helping materialize the approach that encourages the maritime-based economy; boosting basic activities concerning the energy sector; developing the infrastructure sector and introducing new financing solutions; enhancing local know-how; using modern solutions to finance projects through the financial market mechanism; increasing efficiency and productivity in the energy sector to create more value in products; encouraging export-oriented approaches; helping develop renewable and non-renewable business activities; and setting on a course toward sustainable development through environment-friendly activities and supporting startup firms.

Last year, the secretariat of the Supreme Council of Free and Special Economic Zones held the IFEEX2021 on October 25-27 on the southern island of Kish. The event was aimed at finding out new strategies to help free and special economic zones have a stronger role in the development of the national economy; boosting cooperation between different entities involved in the oil, gas, petrochemical and renewable energy industries; optimizing interactions among various industrial entities; introducing investment opportunities; making the utmost use of local

capacities when it comes to industrial production, consulting and subcontracting services and startup activities; and assessing how to finance industrial projects through the capital market. About 137 companies participated in the last year's event. Some 6500 people also attended the exhibition. On the sidelines of the event, a series of workshops and commercial panels were also held.

The second exhibition and conference of the kind, IFEEX2023, is now set to be held on January 2 - 4, 2023 on Qeshm Island, where is hoped to be a new energy hub for the country. The upcoming event is expected to attract even more attention than the first one as Qeshm already has oil & gas attractions at the same time.

► About Qeshm Island

With an area of 1500 square kilometers, the southern island of Qeshm has unique natural attractions. However it also has more than 17 oil and gas fields with over 1.2 trillion cubic meters of in-place gas and 4 billion barrels of in-place oil. So it is considered one of the most strategic oil and gas rich free zones in Iran. Local authorities have taken serious actions in the past few years to make best use of the island's energy capacity in line with the national economic and energy policies, in a way that the island becomes one the biggest energy hubs in the country. Given the island's special situation including its appropriate depth of coastal water, its growing number of docks under development, its international airport and the recent actions taken by local authorities and the private sector, Qeshm is considered a unique energy zone. It has been selected the host of the second IFEEX since the event can help draw more public attention to the unique capacities of the island. Local authorities hope that the island has a great potential to become a major regional energy hub. In the near future.
